

Template and Gallery Manager SharePoint 2007 Solution Setup

Setup

A basic knowledge of how to administer SharePoint and how to set up CorasWorks web parts will be helpful in making the changes specified below. If more instruction is needed, refer to the CorasWorks Capabilities Guide.

| Task | Description |
|-----------------------------|---|
| Create Site | Create the site using the <code>CorasWSC.TemplateandGalleryManager.v9.0.1</code> template. |
| Add Sites to Directory List | <p>Use the actions drop-down box on the main page to run the “Add Site to Include in Gallery Aggregate Displays” action. This will allow you to add the URL’s of sites that contain the template and web part page galleries you want to display.</p> <p>Be sure to use the URL of the top level of the site collection, as these are the only sites that contain template and web part page galleries.</p> |

Security Setup

Since the content displayed in this solution all comes from other sites, security in those sites is important to consider. Only Site Owners are able to copy or delete files from inside the site galleries. If someone does not have permission to access any of the sites in the directory list, those lists will simply not display for that person.
